

THE BATTERY

CHEAT SHEET

10 rules to make your e-scooter or e-bike battery last for years

CHARGING

1

LET IT COOL DOWN FIRST

Just finished a ride? Wait until the battery is cool before you plug it in.

2

LIVE BETWEEN 20% AND 80%

For everyday rides, skip 100%. Charge it full only before a long trip.

3

NEVER CHARGE IT COLD

Below 0°C (32°F) charging can permanently damage the cells. Warm it up indoors first.

4

UNPLUG WHEN IT'S FULL

Don't leave it sitting on the charger for days.

5

ONLY THE ORIGINAL CHARGER

Cheap no-name chargers are a fire risk and can kill your battery.

STORAGE

6

STORING IT? KEEP IT AROUND 50%

Weeks at 0% or 100% cost you capacity you never get back.

7

CHECK IT EVERY FEW WEEKS

Dropped below about 20%? Top it up.

8

KEEP IT OUT OF THE HEAT

No hot cars, no direct sun. Room temperature is best.

SAFETY

9

CHARGE WHERE YOU CAN SEE IT

Not while you sleep, not next to your exit, and on a hard floor.

10

SWOLLEN, HISSING OR SMELLY? STOP.

Don't ride it, don't charge it. Move it away from people. Smoke = call the fire service.

Every battery is different. Always check your manual.
